

# CLAY PIPE SEALS

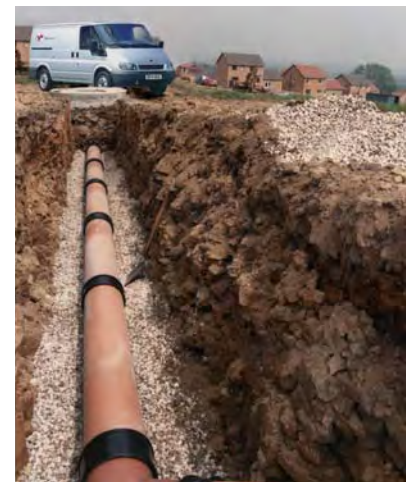

VIP-Polymers provide a range of seals for jointing vitrified clay pipe from the standard spigot and socket design to seals incorporated into plastic sleeves for jointing straight wall pipe.

We produce a wide range of high-performance seals for the jointing of vitrified clay pipe. These include the standard spigot and socket design, seals incorporated into plastic sleeves for the jointing of straight wall pipe and seals used for jacking pipe applications.

Applications include:

- Insertions of new junctions into existing pipelines
- Repair and renovation of existing pipeline networks

In addition, we design and manufacture a range of adaptor seals suitable for connecting any combination of vitrified clay, cast iron, ductile iron, concrete and PVC-u pipes. These couplings consist of moulded synthetic elastomeric sleeves and stainless steel clamping bands.

VIP-Polymers vitrified clay pipe seals are available in diameters of up to 2000mm and can be supplied in numerous elastomeric materials designed to withstand the most demanding drainage applications.
