

FITTINGS & FLANGES

VIP-Polymers offer a comprehensive range of proprietary and custom designed seals for use in pipe couplings and pipe repair products. We also make seals to suit flange adaptors, stepped couplings, long sleeve couplings and end caps.

Some pipe systems do not have their own integral connection method, relying instead on generally available fittings. At VIP-Polymers we manufacture seals for pipe couplings and pipe repairs to match many of these fittings from the smallest to the largest diameters.

We manufacture seals for fittings that are used for repairs and pipe jointing to both ductile iron, concrete and plastic pipelines, the sizes of which are only restricted by the size of the couplings.

For Gas applications, VIP-Polymers nitrile compound gasket complies with EN682 (Elastomeric seals - Materials requirements for seals used in pipes and fittings carrying gas and hydrocarbon fluids) which sets out the physical properties and quality requirements for gaskets used in gas applications.

Our valve seat rings for butterfly valves are engineered to extremely tight dimensional standards.

All our seals can be supplied in various compound formulations developed to meet the latest National and International standards.
