

# RUBBER FLOORING

Please note that colours shown are as accurate as printing processes will allow.

VIP-Polymers are pleased to offer our own range of synthetic rubber flooring. Ideal for use in airports, schools, hospitals and other high traffic areas, VIP-Polymers flooring offers the following benefits:

**Aesthetics** – Available in a wide range of colours and finishes

**Durability** – Exceptional wear resistance, resists cigarette burns and dents from impacts. The natural elasticity of rubber ensures self-healing of most scratches and abrasions.

**Anti-Slip** – The naturally slip resistant surface ensures safe walking and standing even on ramps, elevators, buses and trains.

**Flexibility** – Will not break or crack on bending and therefore, can be applied on curved and angled surfaces.

**Fire Safety** – Difficult to ignite and self-extinguishing

**Sound Proofing** - Remarkable sound deadening properties minimise footfall sound pollution in high traffic areas and ensure a quiet and pleasant environment.

**Easy to install and maintain** – Can be quickly and easily installed using our recommended adhesives. It is easy to clean and maintain ensuring total satisfaction through out its life. Larger 602 x 602mm size tiles can be installed faster with fewer seams.

**Value** – Has one of the lowest life cycles costs of any flooring option as a result of its exceptional wear resistance and extremely long life.

Available in 2mm, 3mm, 4mm & 6mm thicknesses and in Round or Square studded design, Fleck or Vitrea pattern.

### Laying instructions

Can be laid with a suitable adhesive, on virtually any firm, dry, clean and level sub-floor. The sub-floor should be free from dust, grit and oil stains. VIP-Polymers will recommend a suitable adhesive depending on application.

After installation, avoid using the floor for 24 hours after laying of the tiles and cover and protect it from damage by other parallel construction/ finishing activities.

Flooring should be installed by experienced flooring contractors. Please contact VIP-Polymers for a more comprehensive guide.

Full technical and laying instructions available on request
